## Lock-In-Amplifier Module

Specifications		Test Conditions	$V_s = \pm 15 \text{ V}$ , $T_A = 25 \text{ }^\circ\text{C}$
Voltage Input		Voltage input characteristic Voltage input range Voltage input coupling Voltage input impedance Voltage input noise Voltage input CMRR Voltage input gain drift	true differential instrumentation amplifier 3 $\mu\text{V}$ ... 1 V in 1-3-10 steps (for full scale output) AC 1 $\text{M}\Omega$ // 4 pF 12 nV/ $\sqrt{\text{Hz}}$ 110 dB @ 1 kHz, 100 dB @ 10 kHz 100 ppm/K
Current Input		Current input characteristic Current input range Current input noise Current input source-capacit. Current input gain error vs. Source capacitance	transimpedance amplifier, -100 kV/A (inverting) 30 pA ... 10 $\mu\text{A}$ in 1-3-10 steps (for full scale output) 0.4 pA/ $\sqrt{\text{Hz}}$ 10 pF – 500 pF (recommended)
		Cs      f < 10 kHz	
		10 pF      < 1 % 100 pF      < 1 % 1 nF      < 2 %	
Signal Filter (without optional Bandpass-Module)		Signal filter lowpass (-3 dB BW) Signal filter highpass (-3 dB BW) Signal filter cutoff accuracy Max. dynamic reserve	1 MHz, 100 kHz, 10 kHz, 1 kHz, 100 Hz; 6 dB/oct. selectable per jumper 0.2 Hz, 1 Hz, 10 Hz, 100 Hz, 1 kHz; 6 dB/oct. selectable per jumper ±20 % 80 dB
Signal Monitor Output		Signal monitor output gain Signal monitor output voltage Signal monitor output impedance Signal monitor output current	1 ... 3333 (depends on gain setting) ±8 V max. 100 $\Omega$ ±10 mA max.
		Note	When using current input with low input ranges, the monitor output may be disabled by opening the soldering jumper at the board (near JP1) to prevent from recoupling.
Demodulator		Demodulator dynamic reserve	15 dB @ ultra stable setting 35 dB @ low drift setting 55 dB @ high dynamic setting
Reference Input		Reference input voltage range Reference input impedance Reference acquisition time	±100 mV ... ±5 V @ bip. mode (0 V comparator threshold) -5 V / +10 V @ TTL mode (+2 V comparator threshold) 1 $\text{M}\Omega$ max. 2 s @ fast setting max. 4 s @ slow setting
Phase Shifter		Phase shifter type Phase shifter range Phase shifter resolution Phase shifter drift Phase shifter accuracy	digital, working frequency 5 Hz ... 10 kHz 0 ... +360 ° 1.4 ° <100 ppm/K <0.3 °
Time Constants		Time constant range Time const. filter characteristic	3 ms ... 10 s in 1-3-10 steps 6 dB/oct. or 12 dB/oct. switchable

5	D			D			1 s		
6	E			E			3 s		
7	F			F			10 s		
Phase shift setting	Phase shift is adjusted by 2 phase switches with 8 Bit resolution. Values 0 ... 255 ( Hex 00 ... FF ) correspond to phase shift setting 0 ... +360 ° . One step with switch marked "Coarse" changes phase shift by 22.5 ° . The "Fine"-switch changes phase shift by 1.4 ° - steps:								
If 2-f mode is selected, the resolution of digital phase control changes to 2.8 ° and the phase shift range doubles to 0 ... +720 ° .

Connector Wiring Options	General	<p>The BNC-connector configuration can be easily changed by setting electrical jumpers at the internal I/O-adapter card. Disconnect the power supply and open the case by loosening the two upper screws at the case front and rear side. Please pay attention to the ground connection at the backplane. Now open the case by lifting the top. The jumper options and functions are described in the following table.</p>

## Lock-In-Amplifier Module

**Remote Control Operation**
**General**

Remote control input bits are opto-isolated and connected by logical OR to local switch setting. The 4 hexadecimal switches are 4 Bit-coded as shown in the following table:

switch code	MSB Bit 3	Bit 2	Bit 1	LSB Bit 0
0	Low	Low	Low	Low
1	Low	Low	Low	High
2	Low	Low	High	Low
3	Low	Low	High	High
4	Low	High	Low	Low
5	Low	High	Low	High
6	Low	High	High	Low
7	Low	High	High	High
8	High	Low	Low	Low
9	High	Low	Low	High
A	High	Low	High	Low
B	High	Low	High	High
C	High	High	Low	Low
D	High	High	Low	High
E	High	High	High	Low
F	High	High	High	High

For remote control a switch setting, set the local switch to "0" and select the wanted setting via the 4-bit-code at the corresponding digital inputs.

**Sensitivity switch - corresponding inputs**

Bit	corresponding control port input	
Bit 0	SENO	(Pin A22)
Bit 1	SEN1	(Pin C21)
Bit 2	SEN2	(Pin A21)
Bit 3	DYN0	(Pin C22)

**Time constant switch - corresponding inputs**

Bit	corresponding control port input	
Bit 0	TC0	(Pin C19)
Bit 1	TC1	(Pin A19)
Bit 2	TC2	(Pin C20)
Bit 3	TCSL	(Pin A20)

**Phase switch coarse - corresponding inputs**

Bit	corresponding control port input	
Bit 0	PH4	(Pin A26)
Bit 1	PH5	(Pin C26)
Bit 2	PH6	(Pin A25)
Bit 3	PH7	(Pin C25)

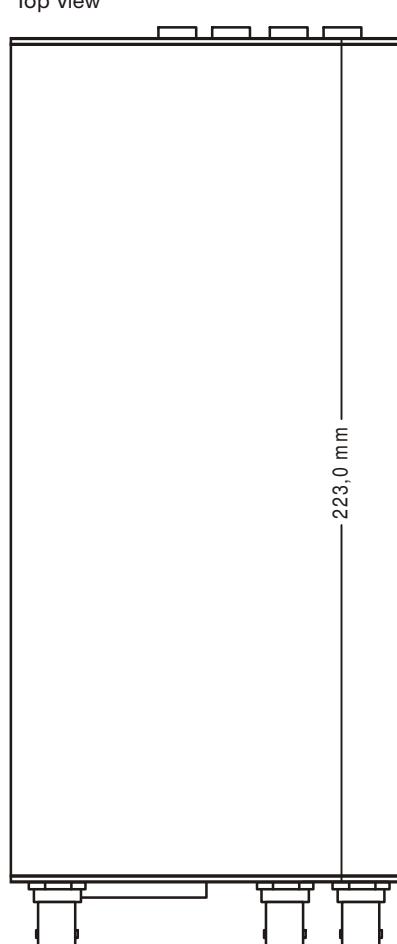

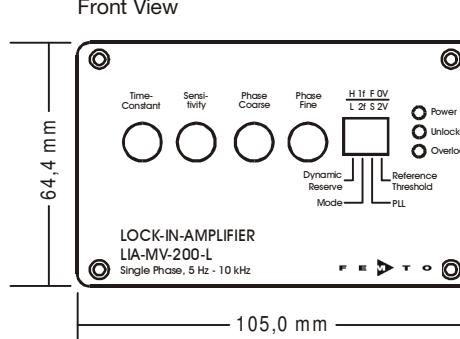

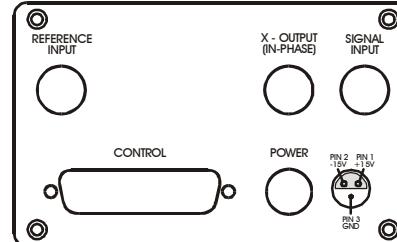

**Phase switch fine - corresponding inputs**

Bit	corresponding control port input	
Bit 0	PH0	(Pin A28)
Bit 1	PH1	(Pin C28)
Bit 2	PH2	(Pin A27)
Bit 3	PH3	(Pin C27)

**Remote control example**

For example, to select a switch setting code "6", you have to connect a "high"- level signal to the corresponding control input pins Bit 1 & Bit 2. Mixed operation, e.g. local phase settings and remote controlled sensitivity setting, is also possible.
