

Excimer Laser EnergyMax Sensors

Energy Range 50 μ J to 1 J

Coherent Excimer Laser EnergyMax sensors are specifically optimized for use with ArF lasers operating at 193 nm and with KrF lasers at 248 nm. Excimer Laser EnergyMax Series sensors feature high accuracy and large active area (up to 50 mm), and utilize a novel coating that delivers superior long-term damage resistance.

The Excimer Laser EnergyMax Series comprises four different models, two that are optimized for operation at 193 nm and two that are intended for 248 nm (although all models are capable of producing accurate measurements throughout the UV, visible and near IR). These sensors utilize our MaxUV coating, which delivers high damage threshold at deep UV wavelengths, as well as excellent resistance to long-term UV exposure, and enables operation at repetition rates of up to 400 Hz.

FEATURES

- Unique MaxUV coating delivers increased damage threshold, long term UV exposure resistance and high repetition rate operation
- Operate over the 190 nm to 2.1 μ m range
- Enable pulse energy measurements from 50 μ J to 1 J
- Measure single shot to 200 Hz repetition rate
